| 10.2 The Choice                                | 15       |
| 10.3 The Commitment                            | 15       |

## Intervention Strategies Playbook

### Specific Actions by Actor to Maintain H<sub>3</sub> > 0

*A Practical Guide for Navigating the Coordination Threshold*

---

## Guiding Principle

The mathematics is clear:

- $H_3$  must stay above  $\theta \approx 0.375$
- Current  $H_3 \approx 0.45$ , declining at  $\sim 0.015/\text{year}$
- AI is accelerating the decline
- Window for intervention: 1-3 years

Every action should be evaluated by:

1. Does it raise  $H_3$ ? (trust building)
  2. Does it lower  $\lambda$ ? (reduce modernization pressure)
  3. Does it increase  $R$ ? (add redundancy)
  4. Net coordination score =  $\Delta H_3 - 0.5 \times \Delta \lambda$
- 

## 1. For Policymakers and Governments

### 1.1 Immediate Actions (Next 6 Months)

#### Establish Coordination Impact Assessment (CIA)

Requirement: All major AI deployments must assess coordination impact

Components:

1.  $H_3$  Impact Analysis (effect on trust)
2.  $\lambda$  Acceleration Analysis (rate of change introduced)
3. Differential Impact (effect on polarization)
4. Mitigation Plan (how to offset negative effects)
5. Monitoring Framework (real-time tracking)

Threshold: Net score  $< -0.1 \rightarrow$  Requires mitigation before deployment

Threshold: Net score  $< -0.3 \rightarrow$  Prohibited without special authorization

#### Fund Verification Infrastructure

Investment: \$5B over 3 years (globally coordinated)

Priorities:

1. Real-time fact-checking at scale
2. Source authentication systems
3. Cross-partisan verification mechanisms
4. Deepfake detection and labeling
5. Media provenance tracking

Expected  $H_3$  impact:  $+0.05$  to  $+0.10$

## **Mandate Algorithm Transparency**

Requirement: Platforms must disclose:

1. What optimization targets are used
2. How recommendations are generated
3. Effect on cross-group exposure
4. Polarization metrics
5. User control options

Penalty: Failure to disclose = liability for coordination damage

## **1.2 Short-Term Actions (6-18 Months)**

### **Create Economic Transition Fund**

Purpose: Manage AI-driven displacement

Components:

1. Universal basic services platform
2. Retraining matching systems
3. Community transition support
4. AI gain redistribution mechanism

Size: 1% of AI-generated economic gains

Expected  $H_3$  impact: +0.03 to +0.05

### **Establish International Coordination Treaty**

Elements:

1. Shared  $H_3$  measurement standards
2. Mutual AI governance recognition
3. Joint early warning systems
4. Coordination damage liability
5. Technology transfer protocols

Model: Vienna Convention + AI-specific provisions

### **Reform Liability for Coordination Damage**

Principle: Those who damage coordination capacity pay

Implementation:

1. Define measurable coordination harm
2. Establish causal attribution standards
3. Create proportional liability framework
4. Fund trust-rebuilding with damages

Expected  $\lambda$  reduction: -0.05 to -0.10

### **1.3 Medium-Term Actions (18-36 Months)**

#### **Build Collective Intelligence Infrastructure**

Investment: \$10B globally

Components:

1. AI-facilitated deliberation platforms
2. Preference aggregation systems
3. Cross-group dialogue infrastructure
4. Consensus-building mechanisms
5. Democratic decision-making at scale

Expected  $H_3$  impact: +0.04 to +0.08

#### **Restructure Incentives**

Current: GDP, engagement, shareholder returns

Required: Include coordination health metrics

Proposals:

1. Gross Coordination Product (GCP) metric
  2.  $H_3$  as component of national well-being
  3. Tax benefits for trust-building activities
  4. Penalties for trust-eroding activities
- 

## **2. For Technology Companies**

### **2.1 Platform Design**

#### **Optimization Target Shift**

Current: Engagement maximization

Required: Coordination-aware optimization

Implementation:

1. Add  $H_3$  to objective function
2. Penalize polarization-inducing content
3. Reward cross-group exposure
4. Limit infinite scroll mechanisms
5. Implement "cool down" periods

Formula for content ranking:

Score =  $\alpha_R \times \text{Relevance} + \alpha_E \times \text{Engagement} - \alpha_P \times \text{Polarization} + \alpha_B \times \text{Bridging}$

Where  $\alpha_P > 0$  and  $\alpha_B > 0$

#### **Anti-Polarization Features**

Mandatory features:

1. Cross-group content exposure (minimum 15%)
2. Friction on inflammatory sharing (confirmation delay)
3. Context provision for contested claims
4. Source quality indicators
5. Bridging behavior rewards

Prohibited features:

1. Outrage amplification
2. In-group echo chambers without consent
3. Algorithmic radicalization paths
4. Dark patterns for engagement

## **Reality Anchoring**

Implementation:

1. Integrated fact-checking
2. Synthetic media labeling
3. Source provenance tracking
4. Disputed content warnings
5. Alternative perspective exposure

## **2.2 AI Development**

### **Coordination-First Alignment**

Beyond "helpful, harmless, honest":

H<sub>3</sub>-Aligned AI must:

1. Not polarize user groups
2. Provide balanced perspectives
3. Correct misinformation gently
4. Support cross-group understanding
5. Enhance collective decision-making

Testing requirement:

Every AI system tested for coordination impact before deployment

### **Deployment Pacing**

Principle: Governance must precede capability

Implementation:

1. Capability thresholds trigger governance requirements
2. Deployment pauses until governance catches up
3. Incremental rollout with monitoring
4. Automatic throttling on coordination damage
5. Kill switches for emergency situations

## **Open Safety Research**

Share:

1. Coordination impact measurement methods
2. Polarization detection algorithms
3. Trust-building design patterns
4. Failure mode analyses
5. Red team findings

Don't compete on safety—compete on capability within safe bounds.

## **2.3 Business Model Evolution**

### **Move Beyond Engagement**

Current model: Maximize time on platform

Problem: Engagement  $\neq$  value, often = polarization

Alternative models:

1. Subscription (reduces engagement pressure)
2. Value-based (pay for outcomes)
3. Cooperative (user-owned)
4. Public utility (coordination as infrastructure)
5. Hybrid (multiple revenue streams)

### **Transparency as Competitive Advantage**

First-mover advantage for:

1. Full algorithm transparency
  2. User data sovereignty
  3. Coordination impact reporting
  4. Third-party auditing
  5. Democratic governance
- 

## **3. For International Bodies**

### **3.1 Establish Global H<sub>3</sub> Monitoring**

#### **Global Coordination Observatory**

Modeled on: IPCC, WHO, WMO

Functions:

1. Standardized H<sub>3</sub> measurement
2. Early warning system for threshold approach
3. Annual coordination status reports
4. Technology assessment
5. Best practice dissemination

Governance: Multi-stakeholder, independent, transparent

### **International Coordination Technology Agency**

Functions:

1. Coordinate AI governance across jurisdictions
2. Certify coordination-positive technologies
3. Investigate coordination damage
4. Develop intervention protocols
5. Support capacity building

Model: IAEA for coordination physics

## **3.2 Treaty Framework**

### **Coordination Technology Treaty**

Elements:

1. Definition of coordination damage
2. Prohibited technologies (coordination weapons)
3. Regulated technologies (dual-use)
4. Positive technologies (coordination-building)
5. Enforcement mechanisms
6. Dispute resolution

Signatories: Start with G20, expand to universal

### **AI Governance Protocol**

Minimum standards:

1. Coordination impact assessment before deployment
2. Real-time monitoring of deployed systems
3. Automatic throttling mechanisms
4. Cross-border cooperation on enforcement
5. Shared early warning systems

## **3.3 Capacity Building**

### **Coordination Literacy Program**

Investment: \$1B over 5 years

Goals:

1. Global understanding of coordination physics
2. Skills for navigating information environment
3. Cross-cultural communication training
4. Collective decision-making education
5. AI literacy for all

---

## **4. For Civil Society and NGOs**

### **4.1 Trust-Building Organizations**

#### **Cross-Group Dialogue Initiatives**

Design principles:

1. Structured contact (reduces anxiety)
2. Equal status participation
3. Common goals focus
4. Institutional support
5. Long-term relationship building

Effective programs:

- Community dialogue circles
- Workplace integration programs
- Educational exchange
- Collaborative problem-solving
- Shared service projects

#### **Local Trust Infrastructure**

Build redundancy at local level:

1. Community coordination councils
2. Neighborhood mutual aid networks
3. Local verification systems
4. Crisis response cooperation
5. Economic reciprocity circles

R<sub>local</sub> provides resilience if R<sub>global</sub> weakens.

### **4.2 Advocacy and Pressure**

#### **Corporate Accountability Campaigns**

Targets:

1. Engagement-optimized algorithms
2. Coordination-negative AI deployments
3. Opacity in recommendation systems
4. Dark patterns
5. Attention extraction

Methods:

- Shareholder activism
- Consumer boycotts
- Employee organizing

- Public awareness campaigns
- Regulatory advocacy

## **Policy Advocacy**

Priority policies:

1. Coordination Impact Assessment requirement
2. Algorithm transparency mandates
3. AI deployment governance
4. Liability for coordination damage
5. Investment in trust infrastructure

## **4.3 Alternative Infrastructure**

### **Coordination-Positive Platforms**

Support development of:

1. User-owned social networks
2. Cooperative news verification
3. Community-governed AI
4. Transparent recommendation systems
5. Privacy-preserving coordination tools

Principles:

- Governance by users
  - Optimization for well-being
  - No engagement maximization
  - Full transparency
  - Data sovereignty
- 

## **5. For Researchers and Academics**

### **5.1 Measurement Research**

#### **H<sub>3</sub> Measurement Refinement**

Current gaps:

1. Cross-cultural validity
2. Real-time measurement
3. Dark trust quantification
4. AI-specific indicators
5. Threshold precision

Priority research:

- Multi-method convergent measurement
- Passive sensing approaches
- Behavioral trust indicators
- Network analysis methods

- Machine learning for prediction

## **Early Warning System Development**

Indicators to track:

1. Variance in trust measures (increasing → warning)
2. Recovery time after trust shocks (longer → warning)
3. Autocorrelation in trust dynamics (increasing → warning)
4. Polarization metrics (increasing → warning)
5. Narrative fragmentation (increasing → warning)

## **5.2 Intervention Research**

### **Effective Intervention Testing**

Priority experiments:

1. Which dialogue formats build trust?
2. How does algorithm design affect polarization?
3. What governance structures maintain  $H_3$ ?
4. Which AI designs support coordination?
5. How to rebuild trust after threshold breach?

Methodology: RCTs, natural experiments, simulation

## **5.3 Communication**

### **Public Understanding**

Translate coordination physics for:

1. General public (narratives, not equations)
2. Policymakers (actionable frameworks)
3. Business leaders (ROI language)
4. Educators (curriculum integration)
5. Media (story angles)

Key message: The mathematics is clear, the choice is ours.

---

## **6. For Individuals**

### **6.1 Information Hygiene**

#### **Before Sharing**

STOP Protocol:

- S - Source: Who created this? Are they reliable?
- T - Truth: Is this verified? What do fact-checkers say?
- O - Outrage: Am I sharing because I'm angry? Wait 24 hours.
- P - Purpose: Will sharing this build or erode coordination?

Rule: If unsure, don't share.

## **Consumption Choices**

Reduce  $\lambda_{\text{personal}}$ :

1. Limit news consumption to 1-2 sources
2. Avoid outrage-optimized content
3. Seek out alternative perspectives
4. Use slow media when possible
5. Take regular information breaks

## **6.2 Relationship Building**

### **Cross-Group Connections**

Build  $H_3_{\text{personal}}$ :

1. Maintain friendships across political lines
2. Engage in community activities
3. Practice perspective-taking
4. Find common ground first
5. Repair relationships after conflict

### **Local Coordination**

Build  $R_{\text{local}}$ :

1. Know your neighbors
2. Participate in community governance
3. Support local institutions
4. Create mutual aid networks
5. Practice cooperative decision-making

## **6.3 Advocacy**

### **Personal Actions That Scale**

High-leverage individual actions:

1. Demand algorithm transparency from platforms
  2. Support coordination-positive products
  3. Vote for coordination-aware policies
  4. Invest in trust-building organizations
  5. Model bridging behavior for others
- 

## **7. Priority Matrix**

### **7.1 By Urgency**

| Timeframe           | Actor          | Action                           | Impact    |
|---------------------|----------------|----------------------------------|-----------|
| <b>0-6 months</b>   | Government     | Fund verification infrastructure | High      |
| <b>0-6 months</b>   | Platforms      | Shift optimization targets       | Very High |
| <b>0-6 months</b>   | Individuals    | Adopt STOP protocol              | Medium    |
| <b>6-18 months</b>  | International  | Establish coordination treaty    | Very High |
| <b>6-18 months</b>  | Tech companies | Deploy coordination-first AI     | High      |
| <b>6-18 months</b>  | Civil society  | Build local trust networks       | Medium    |
| <b>18-36 months</b> | All            | Full coordination infrastructure | Very High |

## 7.2 By Impact

| Action                            | H <sub>3</sub> Impact | $\lambda$ Impact | Feasibility | Priority        |
|-----------------------------------|-----------------------|------------------|-------------|-----------------|
| Algorithm reform                  | +0.05-0.10            | -0.10-0.15       | Medium      | <b>CRITICAL</b> |
| Verification infrastructure       | +0.05-0.10            | -0.10-0.15       | High        | <b>CRITICAL</b> |
| AI governance treaty              | +0.05                 | -0.30            | Low         | <b>CRITICAL</b> |
| Economic transition fund          | +0.03-0.05            | -0.05            | Medium      | HIGH            |
| Collective intelligence platforms | +0.04-0.08            | +0.02            | High        | HIGH            |
| Cross-group dialogue programs     | +0.02-0.04            | 0                | High        | HIGH            |
| Local trust networks              | +0.01-0.02            | 0                | Very High   | MEDIUM          |

## **8. Success Metrics**

### **8.1 Leading Indicators**

Track these weekly/monthly:

1. Platform polarization metrics  
Target: -5%/year
2. AI governance gap (capability vs governance)  
Target: Gap < 2 years
3. Cross-group contact frequency  
Target: +10%/year
4. Verification system usage  
Target: 30% of shared content verified
5. Trust survey trends  
Target:  $dH_3/dt > 0$

### **8.2 Lagging Indicators**

Track these quarterly/yearly:

1. Global  $H_3$  aggregate  
Target:  $H_3 > 0.50$  by 2030
  2. Margin to threshold  
Target: Margin > 0.15 (safety zone)
  3. Coordination redundancy (R)  
Target:  $R > 3.0$
  4. Recovery rate after shocks  
Target: < 6 months to baseline
  5. AI coordination score  
Target:  $A_{\text{positive}} > A_{\text{negative}}$
- 

## **9. Failure Modes**

### **9.1 Common Mistakes**

What doesn't work:

1. FORCING coordination

- Coerced trust is fragile ( $H_3$ \_coerced)
  - Backfires when pressure removed
  - Better: Create conditions for organic trust
2. Suppressing  $\lambda$  without building  $H_3$ 
    - Slowing change without building capacity
    - Just delays the threshold crossing
    - Better: Build  $H_3$  faster than  $\lambda$  grows
  3. Top-down without bottom-up
    - Policy without public buy-in
    - Creates resistance
    - Better: Combine policy with grassroots
  4. Technology-only solutions
    - Tech created the problem
    - Tech alone can't solve it
    - Better: Tech + governance + culture
  5. Treating symptoms not causes
    - Addressing polarization without addressing algorithms
    - Fighting misinformation without building verification
    - Better: Address root causes

## 9.2 If Interventions Fail

If  $H_3$  approaches  $\theta$  despite efforts:

1. MAXIMIZE REDUNDANCY
  - Build local coordination capacity
  - Create autonomous regions
  - Develop alternative institutions
  - Store knowledge for recovery
2. PRESERVE CORE INSTITUTIONS
  - Protect scientific community
  - Maintain economic connections
  - Keep communication channels open
  - Preserve cultural institutions
3. PREPARE FOR RECOVERY
  - Document what happened
  - Identify trust reserves
  - Plan reconstruction
  - Remember:  $P(\text{recovery}) \approx 0.15$
4. NEVER GIVE UP
  - Recovery is possible

- Some civilizations have returned from below  $\theta$
  - Every day above threshold matters
- 

## **10. The Call to Action**

### **10.1 The Mathematics**

Current trajectory:  $H_3 \rightarrow \theta$  in 1-3 years

Required intervention:  $dH_3/dt$  must become positive

Available leverage: ~3 years maximum

If we act now:

$P(\text{survival}) \approx 0.50-0.60$

If we wait:

$P(\text{survival}) \approx 0.15-0.25$

The difference is the action we take today.

### **10.2 The Choice**

Every actor has choices:

Policymakers: Fund verification or watch reality fragment

Platforms: Optimize for coordination or accelerate collapse

Researchers: Develop understanding or remain silent

Individuals: Build bridges or reinforce walls

The mathematics doesn't care about our intentions.

It only responds to our actions.

### **10.3 The Commitment**

For those who understand the stakes:

"I will act with coordination in mind.

I will measure my impact on trust.

I will build bridges, not walls.

I will verify before sharing.

I will support institutions that coordinate.

I will resist systems that polarize.

I understand that my choices affect  
the probability of civilizational survival.

I will act accordingly."

---

*“Coordination collapse is not inevitable. It is the result of choices—the sum of billions of individual decisions about how to treat each other, what to believe, and how to organize our collective lives. The laws of coordination physics describe what happens if we choose poorly. This playbook describes what we can do to choose well.”*

---

*This playbook accompanies Paper 2C, the Earth Coordination Status Report 2025, and the Coordination Technology Framework*
