Policy Brief: Building Coordination-Positive Technology

For Technology Industry Leaders

The Business Case

Technology companies face an unprecedented situation: the tools they build may determine whether civilization survives the next decade. This is not hyperbole—it's physics.

The coordination physics framework reveals: - A universal threshold ($\theta \approx 0.375$) below which societies collapse - Current global trust is ~ 0.45 (margin: only 7%) - AI is accelerating us toward the threshold - The window for action: 1-3 years

For tech companies, this creates both existential risk and unprecedented opportunity.

The Technology Evaluation Matrix

Every technology affects two key variables:

Variable	Description	Your Impact
ΔH_3	Change in trust/coordination	Design choice
$\Delta \lambda$	Change in modernization pressure	Deployment choice

The formula:

$$\text{Coordination Score} = \Delta H_3 - 0.5 \times \Delta \lambda$$

Score > 0.3: Deploy aggressively

Score 0.1-0.3: Deploy with monitoring

Score -0.1 to 0.1: Neutral - design matters

Score < -0.1: Deploy with extreme caution

Score < -0.3: Restrict or redesign

How Current Products Score

Product Category	ΔH_3	$\Delta \lambda$	Score	Status
Translation AI	+0.6	+0.2	+0.5	☐ Deploy
Verification systems	+0.7	+0.1	+0.65	☐ Deploy
Collective decision tools	+0.5	+0.2	+0.4	☐ Deploy
General AI assistants	± 0.3	+0.5	-0.05	☐ Design matters
Communication platforms	± 0.4	+0.4	± 0.2	☐ Design matters
Engagement-optimized feeds	-0.4	+0.6	-0.7	☐ Redesign
Deepfake generation	-0.5	+0.3	-0.65	☐ Restrict
Targeted manipulation	-0.7	+0.5	-0.95	☐ Prohibit

Key insight: The difference between a +0.5 and -0.7 product is design and deployment, not inherent technology.

The Business Opportunity

First-Mover Advantage in Coordination Tech

The market for coordination-positive technology is emerging:

Opportunity	Market Size (Est.)	Current Players	Barrier to Entry
Verification infrastructure	\$50B+	Few	Medium
Collective intelligence	\$20B+	Emerging	Low
Trust measurement	\$5B+	Nascent	Medium
Anti-polarization design	\$30B+	None	High
AI alignment monitoring	\$10B+	Few	High

Total addressable market for coordination tech: \$100B+

Regulatory Arbitrage

Companies that self-regulate on coordination impact now will: 1. Shape incoming regulations 2. Avoid costly retrofitting 3. Build public trust 4. Attract talent who want to work on meaningful problems

Liability Protection

As coordination damage becomes legally recognized, companies with: - Pre-deployment coordination assessment - Real-time monitoring - Automatic mitigation

Will have strong liability defenses.

Recommendations by Company Type

For Social Media Platforms

Immediate (Next Quarter)

1. Add H_3 to optimization targets

New objective:

Maximize($\text{Engagement} \times (1 + H_3_impact)$)

Where H_3_impact penalizes polarization and rewards cross-group exposure

2. Implement cross-group exposure minimum

- Target: 15% of content from out-group
- Method: Diversify recommendation pool

- Measurement: Track and report

3. Add friction to inflammatory sharing

- Confirmation delay (5-10 seconds)
- Context provision
- Consequence awareness

Short-Term (6-12 Months)

4. Reality anchoring features

- Integrated fact-checking
- Source quality indicators
- Context provision for contested claims

5. User control expansion

- Algorithm transparency
- Preference modification
- Usage awareness tools

6. Coordination impact reporting

- Quarterly public reports
- H₃ impact metrics
- Third-party auditing

For AI Developers

Immediate (Next Quarter)

1. Add coordination principles to RLHF

Additional training signals:

- Perspective balance
- Reality anchoring
- Bridging behavior
- Polarization avoidance

2. Develop coordination safety benchmarks

- Cross-group understanding test
- Reality anchoring test
- Polarization amplification test

3. Pre-deployment coordination assessment

- Estimate ΔH_3 and $\Delta \lambda$
- Mitigation plan required for negative scores
- Monitoring commitment

Short-Term (6-12 Months)

4. Coordination-aligned AI products

- Fact-checking AI
- Perspective-providing AI

- Bridge-building AI
 - Collective decision-making AI
5. **Governance pacing**
 - Match deployment to governance capacity
 - Incremental rollout
 - Automatic throttling
 6. **Industry coordination**
 - Shared safety standards
 - Common benchmarks
 - Early warning cooperation

For Cloud/Infrastructure

Immediate (Next Quarter)

1. **Coordination impact APIs**
 - Provide H₃ monitoring tools
 - Offer verification services
 - Enable collective intelligence
2. **Responsible use policies**
 - Prohibit coordination-negative applications
 - Require impact assessment
 - Enforce throttling for violations

Short-Term (6-12 Months)

3. **Coordination infrastructure**
 - Trust measurement services
 - Early warning platforms
 - Collective decision-making tools

The TRUST Framework for Product Design

- T - Transparency
 Users understand how products work
 Algorithms are explainable
 Data use is clear
- R - Reciprocity
 Benefits are shared, not extracted
 Value flows to users, not just company
 Community ownership options
- U - Understanding
 Products promote cross-group comprehension
 Multiple perspectives are presented
 Bridging is rewarded

- S - Sovereignty
 - Users maintain control
 - Attention is respected
 - No dark patterns
- T - Truth
 - Products support shared reality
 - Facts are distinguished from opinion
 - Sources are verified

Financial Analysis

The Cost of Inaction

Outcome	Probability	Impact
Coordination collapse	40%	Existential for industry
Extended instability	35%	\$10T+ market disruption
Regulatory backlash	60%	\$100B+ in constraints
Public trust collapse	50%	Massive user attrition

Expected value of inaction: Catastrophic

The Value of Leadership

Action	Cost	Benefit
Coordination-positive redesign	\$1-5B	Market leadership
Verification infrastructure	\$500M	Regulatory favor
AI coordination alignment	\$100M	First-mover advantage
Trust measurement	\$50M	Liability protection

Expected value of leadership: \$100B+ market opportunity

Implementation Roadmap

Q1 2025

- ☐ Conduct coordination audit of all products
- ☐ Add H₃ to product metrics
- ☐ Begin RLHF coordination training
- ☐ Establish monitoring systems

Q2 2025

- ☐ Launch first coordination-positive features
- ☐ Publish first coordination impact report
- ☐ Engage with regulatory development
- ☐ Begin industry coordination

Q3-Q4 2025

- ☐ Scale coordination-positive products
- ☐ Achieve positive coordination score
- ☐ Lead industry standards development
- ☐ Prepare for regulatory implementation

2026

- ☐ Market coordination tech as competitive advantage
 - ☐ Expand to new coordination-positive products
 - ☐ Support international framework
 - ☐ Achieve coordination leadership
-

The Builder's Oath

For those who build the technologies that will shape our future:

"I will design with coordination in mind.
I will measure my technology's impact on trust.
I will not deploy systems that fragment shared reality.
I will build for human agency, not addiction.
I will support collective intelligence, not manipulation.
I will create infrastructure for coordination, not extraction.

I understand that my design choices affect
the probability of civilizational survival.

I will act accordingly."

Key Takeaways

1. **Technology is not neutral** - every product either builds or erodes coordination
2. **The threshold is real** - we are 7% away from civilizational collapse
3. **AI amplifies everything** - both positive and negative dynamics
4. **Design determines impact** - the same technology can be +0.5 or -0.7
5. **First movers win** - coordination tech is a \$100B+ market
6. **The window is closing** - 1-3 years to establish leadership

“Every technology design choice is a civilizational choice. Build for coordination, and you build for survival. Build against coordination, and you accelerate collapse. The mathematics doesn’t care about your intentions—only your actions.”
